

## ABSTRACT

A method and an apparatus for receiving electronic programming guide (EPG) selections entered via a separate wireless remote, storing the EPG selections on a storage device, and transmitting the EPG selections to be displayed when requested. In one embodiment, the EPG selections are transmitted to one or more separate wireless remotes to be displayed on the wireless remotes when requested. In addition, in one embodiment, one or more programs are also transmitted to be separately displayed concurrently with displaying the EPG selections.
